

Getting to Know Pro – Making Maps

Getting to Know Pro – Making Maps

ArcGIS Pro allows you to assemble all the resources required to complete a project in one place. A project contains maps, layouts, tasks, and connections to servers, databases, toolboxes, folders, styles, and so on. It can also incorporate your content from ArcGIS Online.

In previous lessons, you've been given a project to start with that has all the maps and data required for the activity. In this lesson, we'll be starting from scratch, creating a new project and map layout. The use of definition queries and various symbology options will help in displaying your data for a map layout.

Skills

Create new Pro project

Insert New Map and rename

Add Database to Databases folder and make default

Create Definition Query

Change layer symbology: Unique Values, Graduated Colors and Graduated Symbols

Insert graphic elements into layout: Title, legend, north arrow, and scale bar

Set default map for map layout

Layout Activate button

Insert New Layout

Export Layout
